

Book Time Off

Laura Norbury 20071810

An App to book time off from work.

Prerequisites

An android device running Oreo or lower can run this app

Built using API 28

Functionality

An SQLite database is used to create users and login.

In the app the data from booking activity is passed into a list view in the view activity and displayed.

UX/UI

I kept the background white because I have dyspraxia found it easiest to read. I also chose a sans serif font because it is the best for on screen display.
